IN THE ABSTRACT

On page 24 change please amend the abstract to read in full as follows:

A method~~, apparatus, system, and signal-bearing medium that in an~~ <u>in at least one</u> embodiment collect<u>s</u> a performance metric of a first partition in a logically-partitioned computer. If the difference between the performance metric and an expected performance metric exceeds a threshold, then a job or another partition is shut down or suspended. The expected performance metric is calculated based on the performance that is expected if the first partition is the only partition.
